Mehdi Nosrati Sahlan

Android Developer
Tabriz

Hi, my name is Mehdi. Learning new technologies is what I do for a living. I have been in several departments of software development and I enjoy writing solid Java and fun Javascript code. I enjoy it so much that anyone around thinks I'm proactive.

💼 Experience

Full Stack Software Developer
Hospitad
since July 2020
Hospitad is a data-focused start-up concerning the food industry based in Stockholm. I provide the RESTful APIs in the Quarkus/Java application and generate different types of reports from the PostgreSQL database. Also for our new cross-platform mobile application, I picked flutter, since it delivers better performance than other technologies and Dart is a better tool for UI development comparing to Javascript.

Android Developer
Hamsaa
January 2019 - July 2020
Hamsaa is an enterprise communication platform. I initiated migrating the android app codebase to Kotlin and Jetpack libraries. Developing a full-feature instant messaging module using the latest and the best of technologies of the time was my most important task. I also reduced the package size of the android app by 60% after multiple phases of refactoring.

Frontend Developer
Arman Rayan Sharif
January 2018 - January 2019
Created a management dashboard for a code camp that our company was doing in different universities.

‹› Projects

Hamsaa Android Application
Java, Kotlin, Dagger, WebSockets
A communication platform for businesses. The real challenge was building the chat section on top of the XMPP protocol in a very limited period. Hamsaa is used by Saman Bank of Iran.
https://hamsaa.sb24.ir

FourSquare Clone
Kotlin, Koin, Location Services, Navigation,
A simple FourSquare clone which integrates its remote API, listing places around with offline first and location based revalidation.
